

ACP-520 Expanded Topics

ID	Objective	Resources
1	Atlassian Organizations Org admins must be able to create, navigate, and administer organizations with multiple sites and products, as well as understand and manage subscriptions plans and billing.	
1.1	Create and manage an organization - Understand the purpose and structure of an Atlassian organization - Create a new organization, site, and product - Identify default and optional configurations based on selections made during signup	What is an Atlassian organization? Get started with an Atlassian organization Explore an Atlassian organization Delete your Atlassian organization
1.2	Manage multiple sites and products - Create a new product and site under an existing organization - Understand the nuances of multiple sites and products - Understand site URLs and product URLs - Transfer products to another organization - Set landing product for a site	Add a new product to your organization How many instances of a product does my organization need? Update a product URL to a new URL Transfer products to another organization Set your site's landing product
1.3	Manage product access - Understand the available methods to grant product access - Understand the site access settings that control how users get access to your site - Configure approved domains - Configure invitation links - Configure user invites	Specify how users get site access Approved domains User invites Invitation links

1.4	Manage access requests - Understand when users request access - Product access requests must be made by a user with a verified email address and Atlassian account - You can approve or deny these requests on the Access requests page - Users can only use this feature to access your site or products if you choose to approve them - Understand that - When you grant a user access to a product, they're added to the default group for that product group (which may be the default group for other products, as well) and billing starts for the new user - When you deny a user access to a product, you can send them a short message explaining why. - A user who has requested access and been denied won't be able to request access again.	Approve or deny product access requests Learn how to modify access request permissions Specify how users get site access
1.5	Manage product subscriptions & billing - Understand how to view, switch, and cancel product subscription plans - Understand how billable users are calculated - Understand how to manage your bill	Manage your bill for Standard and Premium plans Manage your bill for Enterprise plans Manage your bill for Atlassian Access Manage users and user tiers
2	Users and Groups Org admins must understand the differences between managed and unmanaged accounts, how they are created and how they can be modified. Org admins must also be able to create and manage groups and understand how groups are used in Atlassian Cloud products such as Jira and Confluence.	

2.1	Manage users • Understand managed and non-managed accounts • Grant access to products via product roles • Prompt reset password • Suspend and restore access • Remove user • Log in as user	• Remove or suspend a user • Specify how users get site access • How does product access work? • Update product access settings • Remove product access for users • Delete your Atlassian account • Log in as another user
2.2	Create and administer managed accounts • Understand what managed accounts are: • Some or all of the Atlassian accounts with email addresses from your verified domain(s) • Managed accounts give you the most security and access control over a company's use of Atlassian products • Verify a domain either through HTTPS or DNS TXT • Understand where to access them under Directory > Managed accounts • Understand rules for managed and un-managed accounts • View a managed user account • Edit a managed account • Deactivate a managed account • Delete a managed account	• What is an Atlassian account? • Verify a domain to manage accounts • What are managed accounts? • Resend a verification email to a managed account • Make changes to a managed user account • Deactivate a managed account • Delete a managed account
2.3	Manage groups • Define default product access groups • Understand the configuration choices for default access groups • Rules for default access groups • Purpose and rules for site-admins group	• Create and update groups • Give users access to products

2.4	Analyze and troubleshoot changes to users and groups - Understand the impact to an organization's products when various directory changes are made - Delete groups - Suspend access, restore access, remove user - Deactivate and delete managed accounts - Analyze and troubleshoot the impact of user and group changes within Jira family of products and within Confluence	
3	Admin Roles Org admins must be able to grant administrative privileges to other users. To do so, they must first understand and differentiate between the Cloud offerings, particularly Jira and Confluence, identify their high-level features, and recall the tasks performed by each admin role.	
3.1	Distinguish admin roles - Recall the following five admin roles: org admins, Jira product admins, Jira project admins, Confluence product admins, and Confluence space admins - Understand and distinguish between the roles based on the product features they use and the tasks they perform	Organization admin abilities for cloud products Administering Jira Cloud products Administering Confluence Cloud sites
3.2	Grant appropriate admin privileges - Grant and revoke the org admin role - Grant and revoke the product admin role for Jira Administration and Confluence	Give users admin permissions
4	Advanced features Org admins must be familiar with advanced features, how they are used and their configurations.	

4.1	Configure custom email addresses • Add custom email addresses for product notifications • Understand the purpose of adding a custom email address	• What are the benefits of DMARC? • What are the steps for setting up custom email addresses? • What are the DNS records required for configuring DMARC? • Add your email domain • Copy and add DNS records to your domain provider • Add email addresses for your domain • Remove an email domain • Remove an email address for your domain • Make an email address unavailable in a product • Configure Jira Cloud to send emails on behalf of your domain
4.2	Configure Premium features • Configure Release Tracks • Configure Sandboxes • Configure IP allowlisting • Use admin insights	• Manage product release tracks • Manage product sandboxes • Specify IP addresses for product access

4.3	Configure advanced features • Configure admin APIs • Understand that you can manage your Atlassian cloud organization via the admin APIs • Create an API key • Revoke an API key • Configure application tunnels • Understand what application tunnels are • Provide a secure pathway between a cloud organization and DC/Server instances that live on the company network • Used to integrate products through application links that would otherwise require allowing incoming connections to the company network • Allow integration of Atlassian products and exchange of data and functionalities in a secure way, without exposing the company network or allowlisting incoming connections or IPs • View and manage data residency	• Manage an organization with the admin APIs • About cloud admin REST APIs • What are application tunnels? • Configure application tunnels • Install application tunnels from Atlassian Marketplace • Configure required connections and upstream ports • Create an application tunnel to your self-managed instance • Create a tunneled application link • Troubleshoot application tunnels • Understand data residency
4.4	Understand Atlassian Access • Understand what is Atlassian Access (included in the Enterprise plan or purchased as a subscription on other plans) • Understand that you can connect your identity provider to your Atlassian organization for single sign-on, user sync, and provisioning • Understand how Shadow IT sites are created • Understand how to revoke a user's API tokens	• Understand Atlassian Access • Manage your bill for Atlassian Access • Discover products your users administer
